Brand Experience Design — Crewnox Innovation Labs

Every studio sells someone else's story. This time, we had to tell our own.

Crewnox had built a strong body of client work, but its own website hadn't kept pace — it was the one project the studio kept putting last. This is the story of rebuilding that site, from a blank canvas to a screen ready to hand to developers.

The ask	The territory	The finish line
Elevate the brand experience of the Crewnox website	Homepage, portfolio system, enquiry flow, theming	Development-ready UI, light & dark

A studio's site is its first pitch.

Before a prospective client ever talks to Crewnox, they scroll through its website. The brief was simple to state and hard to deliver: make that scroll feel like proof the studio can be trusted with someone else's brand.

The problem

The studio's portfolio had to carry a lot at once — service breadth, case-study depth, and a route to enquiry — without ever feeling like a generic template. It needed a structure that could hold many projects across many industries, and still read as considered rather than crowded.

The approach

Work moved through three stages inside one Figma file: an open exploration phase to test layout and tone, a resource library to keep imagery and moodboards consistent, and a development-ready stage where every flow — including edge cases like empty categories — was finalised for handoff.

What shipped

01 Homepage in light and dark theme

02 Sub-category landing pages per service

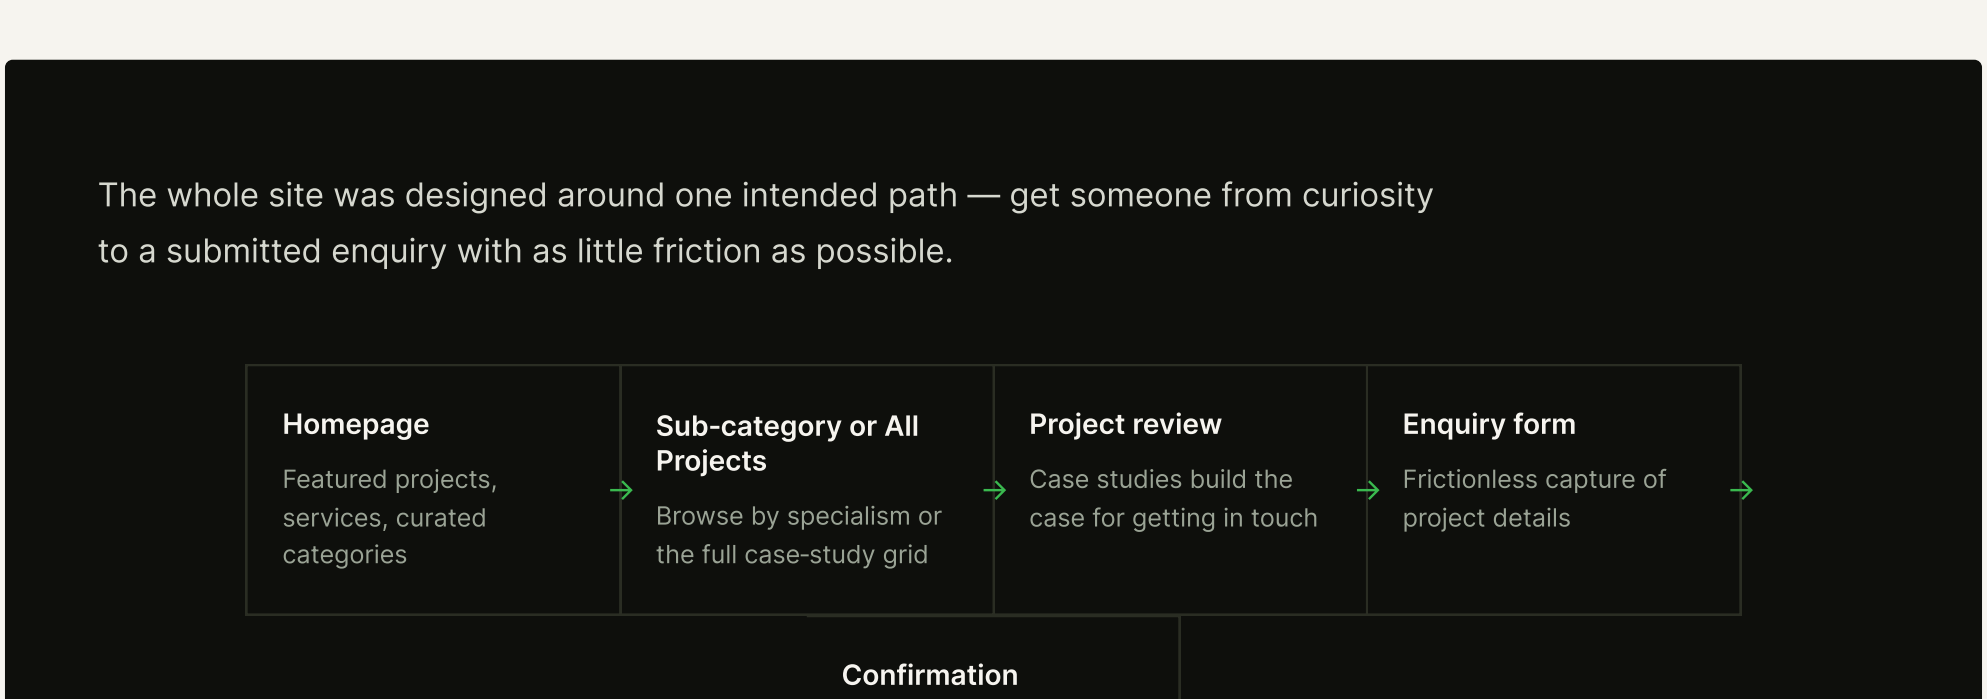
03 "All Projects" filterable portfolio grid

04 Enquiry form with confirmation state

05 Blank state for categories with no live work

06 Full mobile-responsive pass across every screen

The whole site was designed around one intended path — get someone from curiosity to a submitted enquiry with as little friction as possible.



Homepage Featured projects, services, curated categories → **Sub-category or All Projects** Browse by specialism or the full case-study grid → **Project review** Case studies build the case for getting in touch → **Enquiry form** Frictionless capture of project details → **Confirmation** Clear next step, no dead ends

Finding the shape of the page before finishing it.

The design phase was deliberately messy — the same homepage was rebuilt across multiple hero treatments and grid densities before one direction earned its place.

Hero variations

Four distinct hero directions were built out in full to compare how the studio's opening statement could land — testing headline weight, imagery placement, and how quickly a first-time visitor understood what Crewnox does.

Headline hierarchy · Imagery placement

Portfolio grid density

The "All Projects" and featured-work sections were tested at four, five, six, seven, and eight-card densities to find the density that felt curated rather than sparse or overwhelming, across different amounts of published case studies.

4–8 card grids · Scalable to project count

Theme & gradient exploration

A dedicated gradient study fed the light and dark theme system — light backgrounds needed the same brand presence dark mode gets for free from contrast, so gradient washes were tuned specifically for the light theme.

Light theme gradients · Dark mode parity

Responsive drafts

Mobile versions of the homepage and portfolio pages were drafted in parallel with desktop, in both themes, so responsive behaviour was a design decision from the start rather than a compression exercise at the end.

Mobile home, light & dark · Mobile portfolio

Before it looked right, it had to be tried wrong a few times.

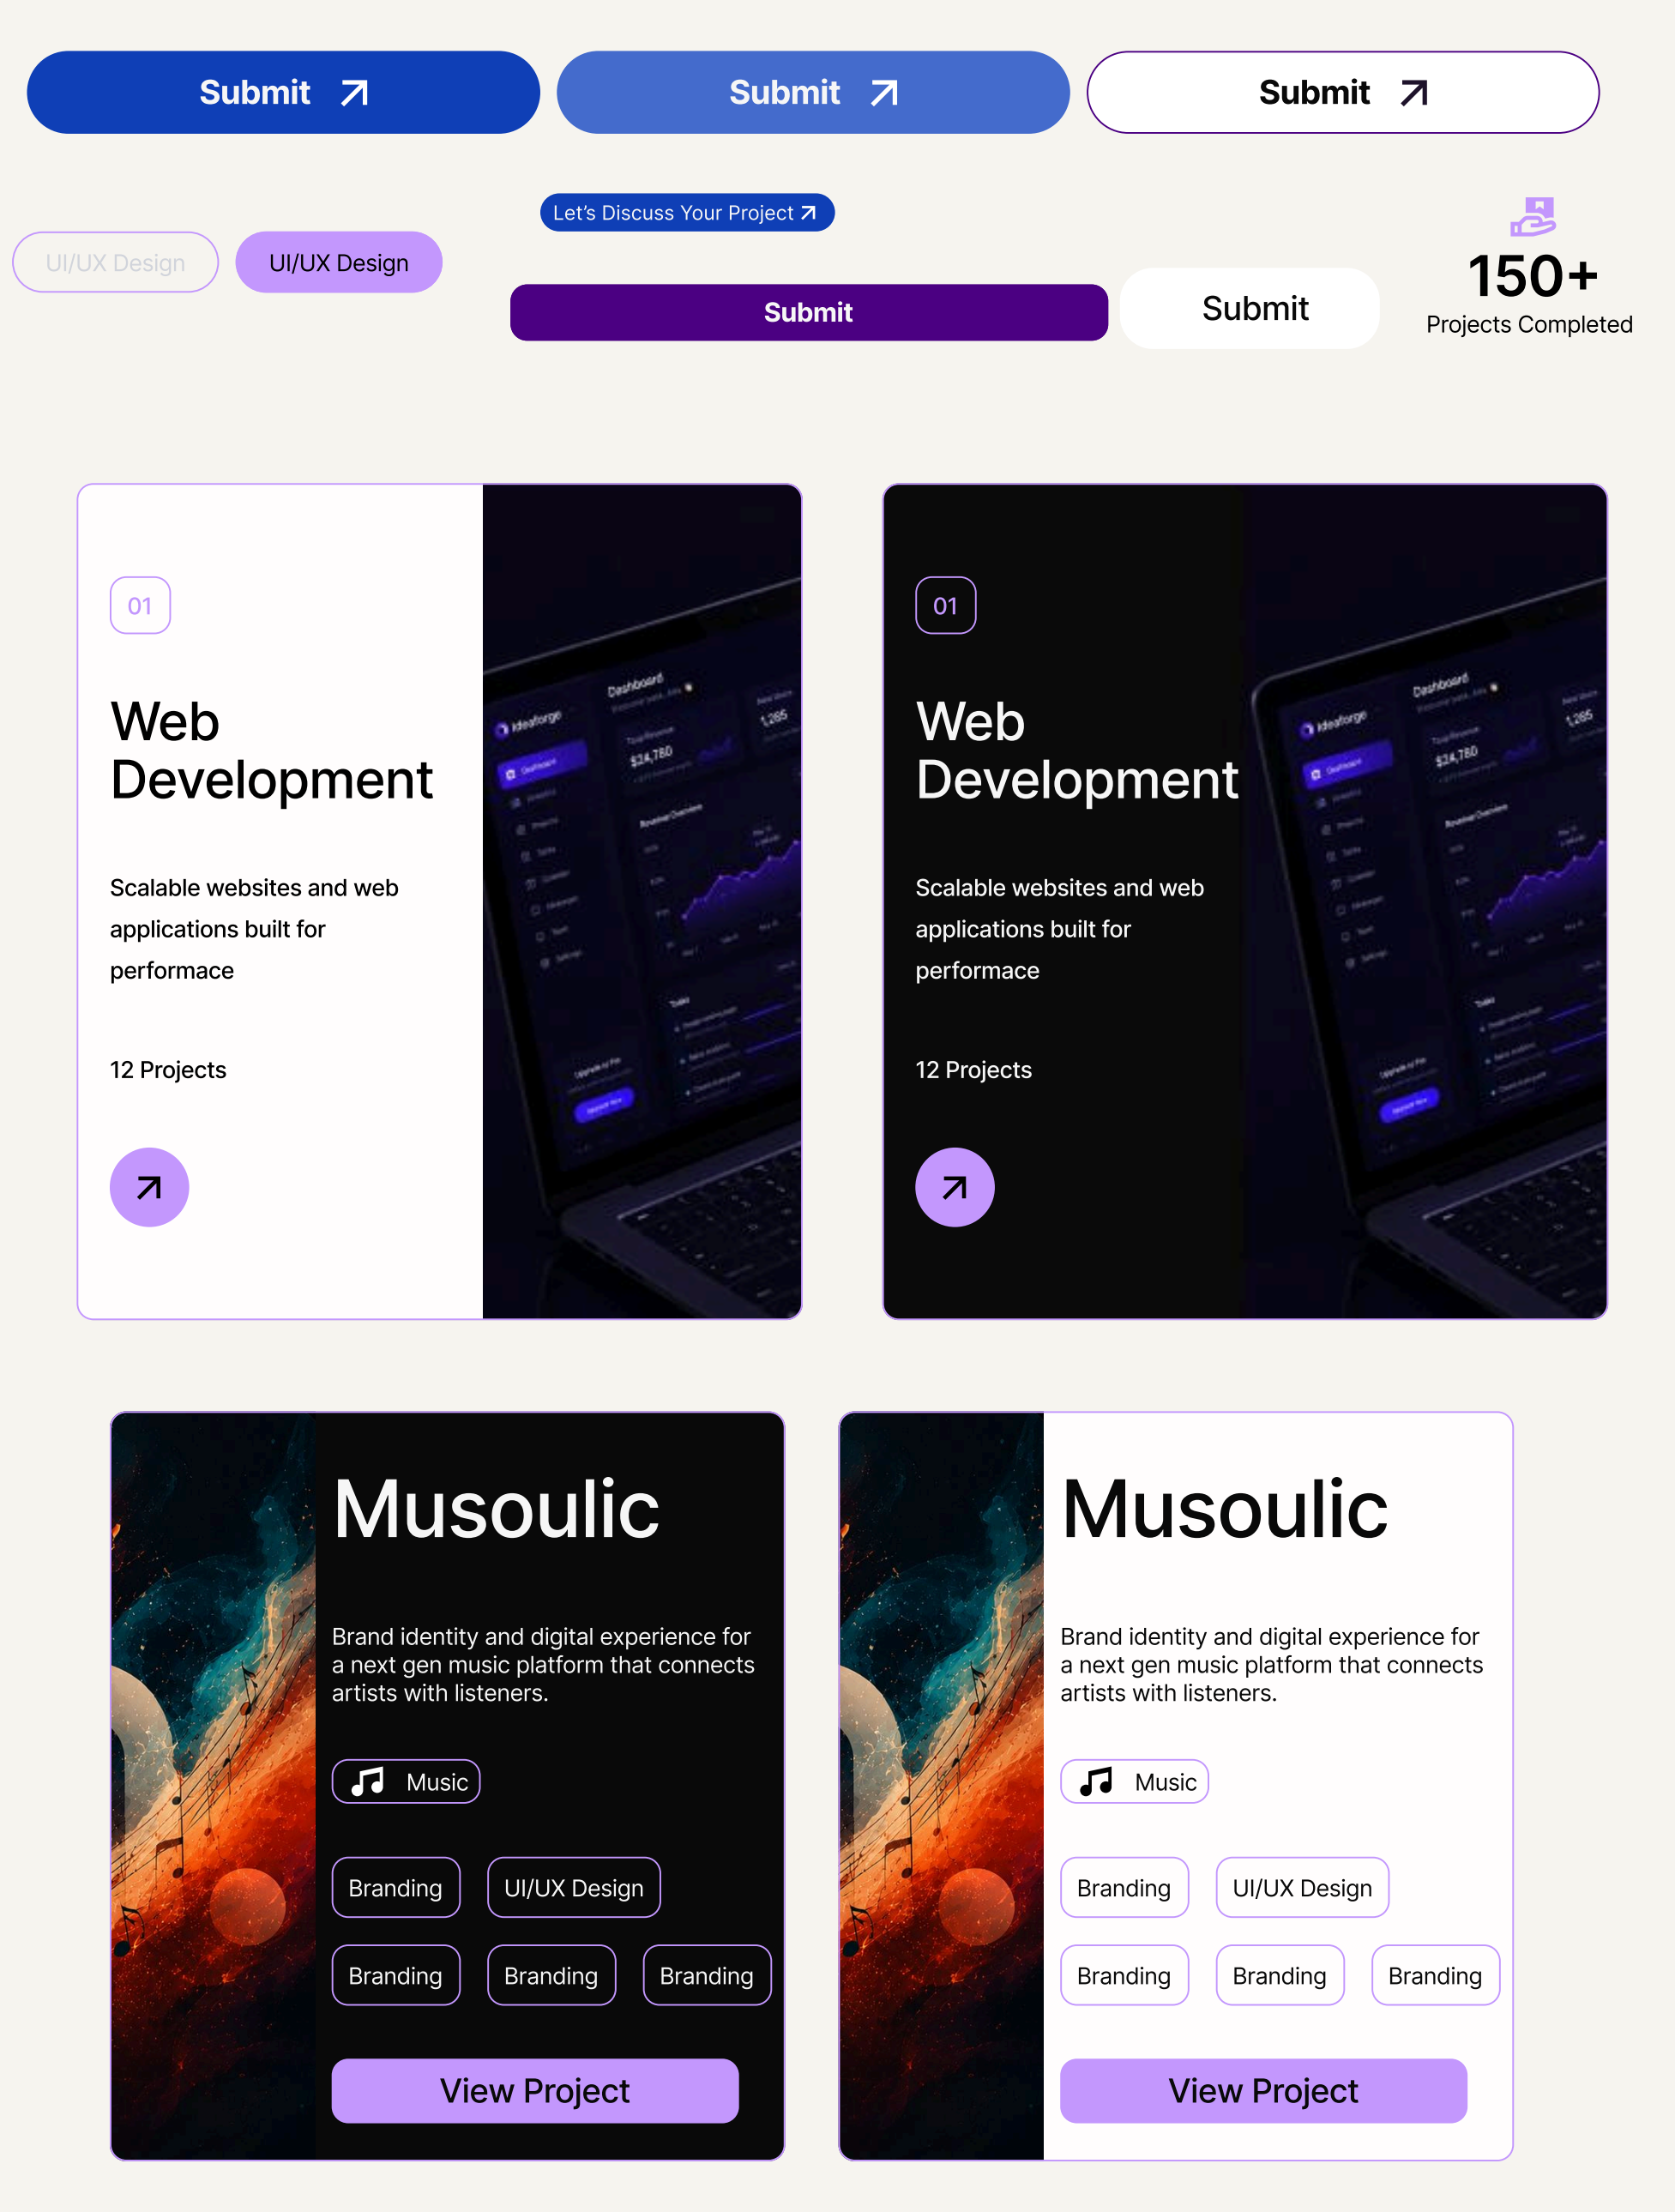
Components



Scalable websites and web applications built for performace

Brand identity and digital experience for a next gen music platform that connects artists with listeners.

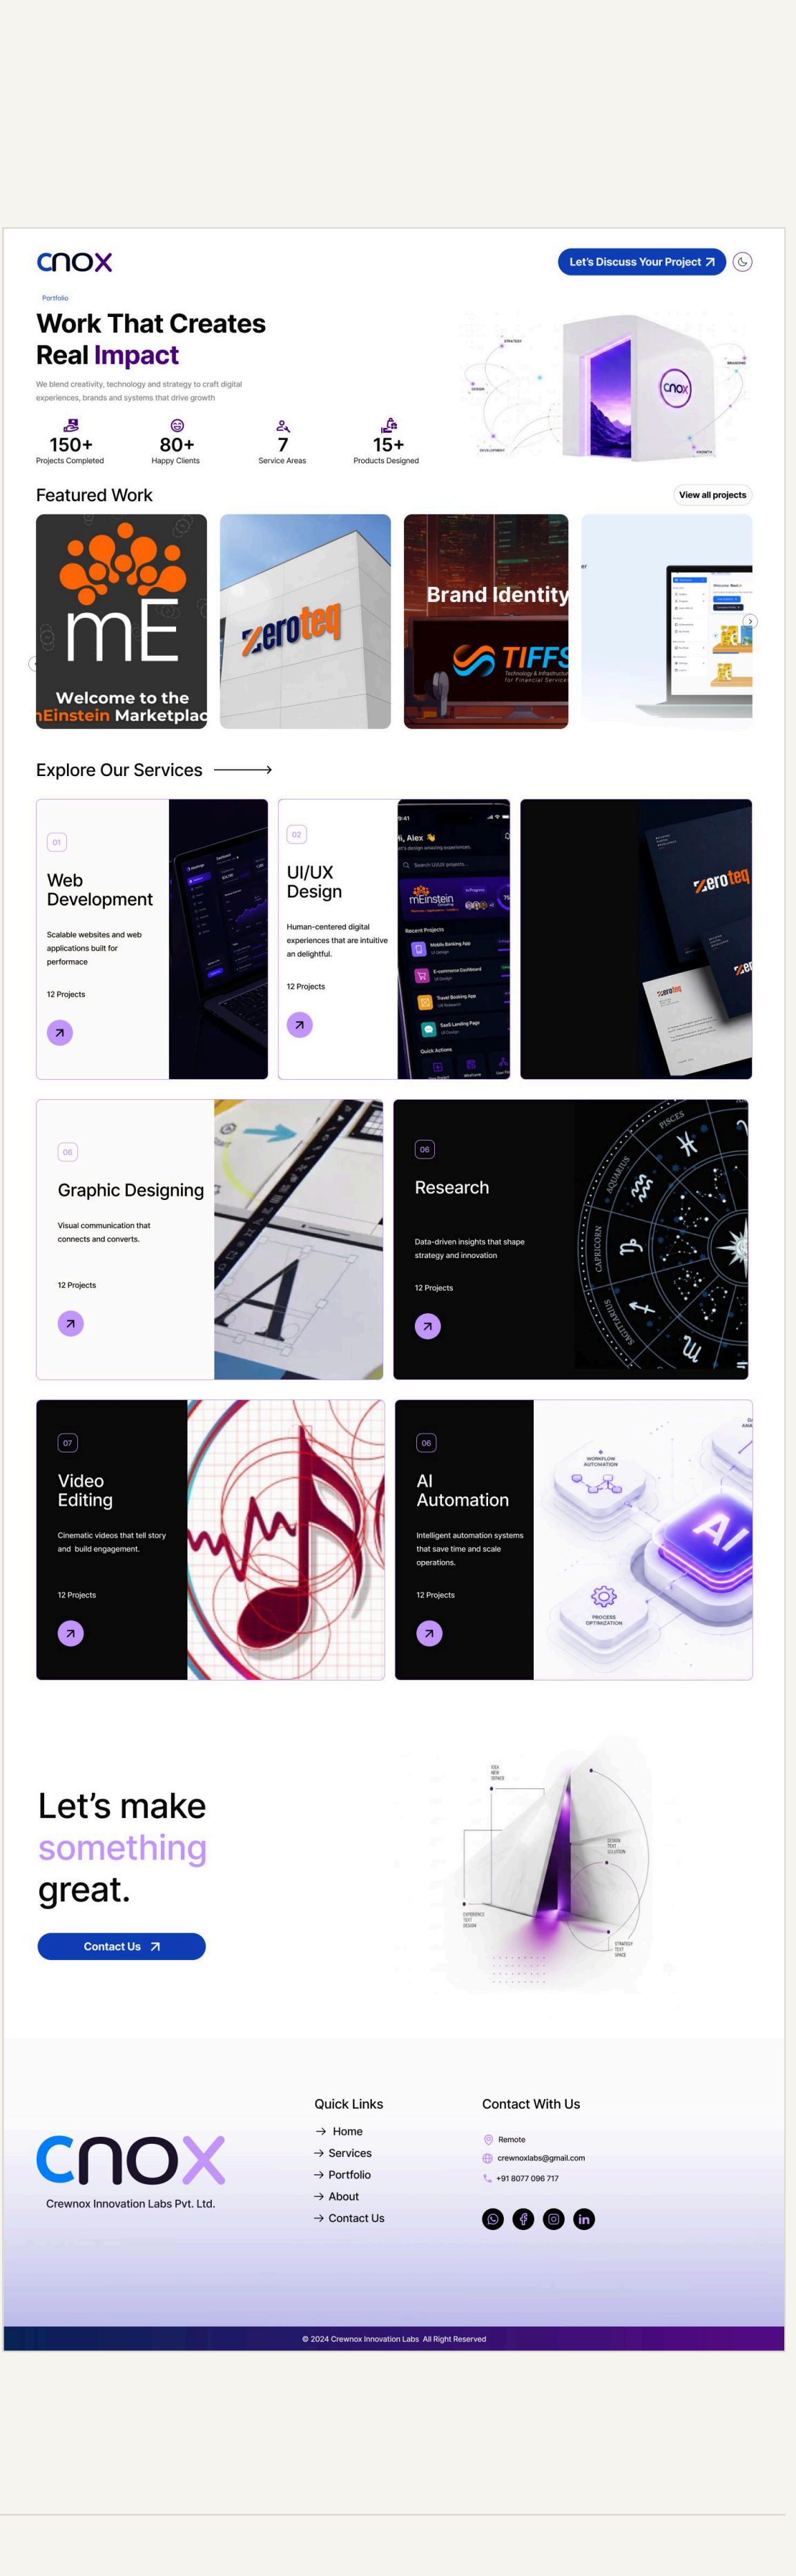
The screens that shipped.

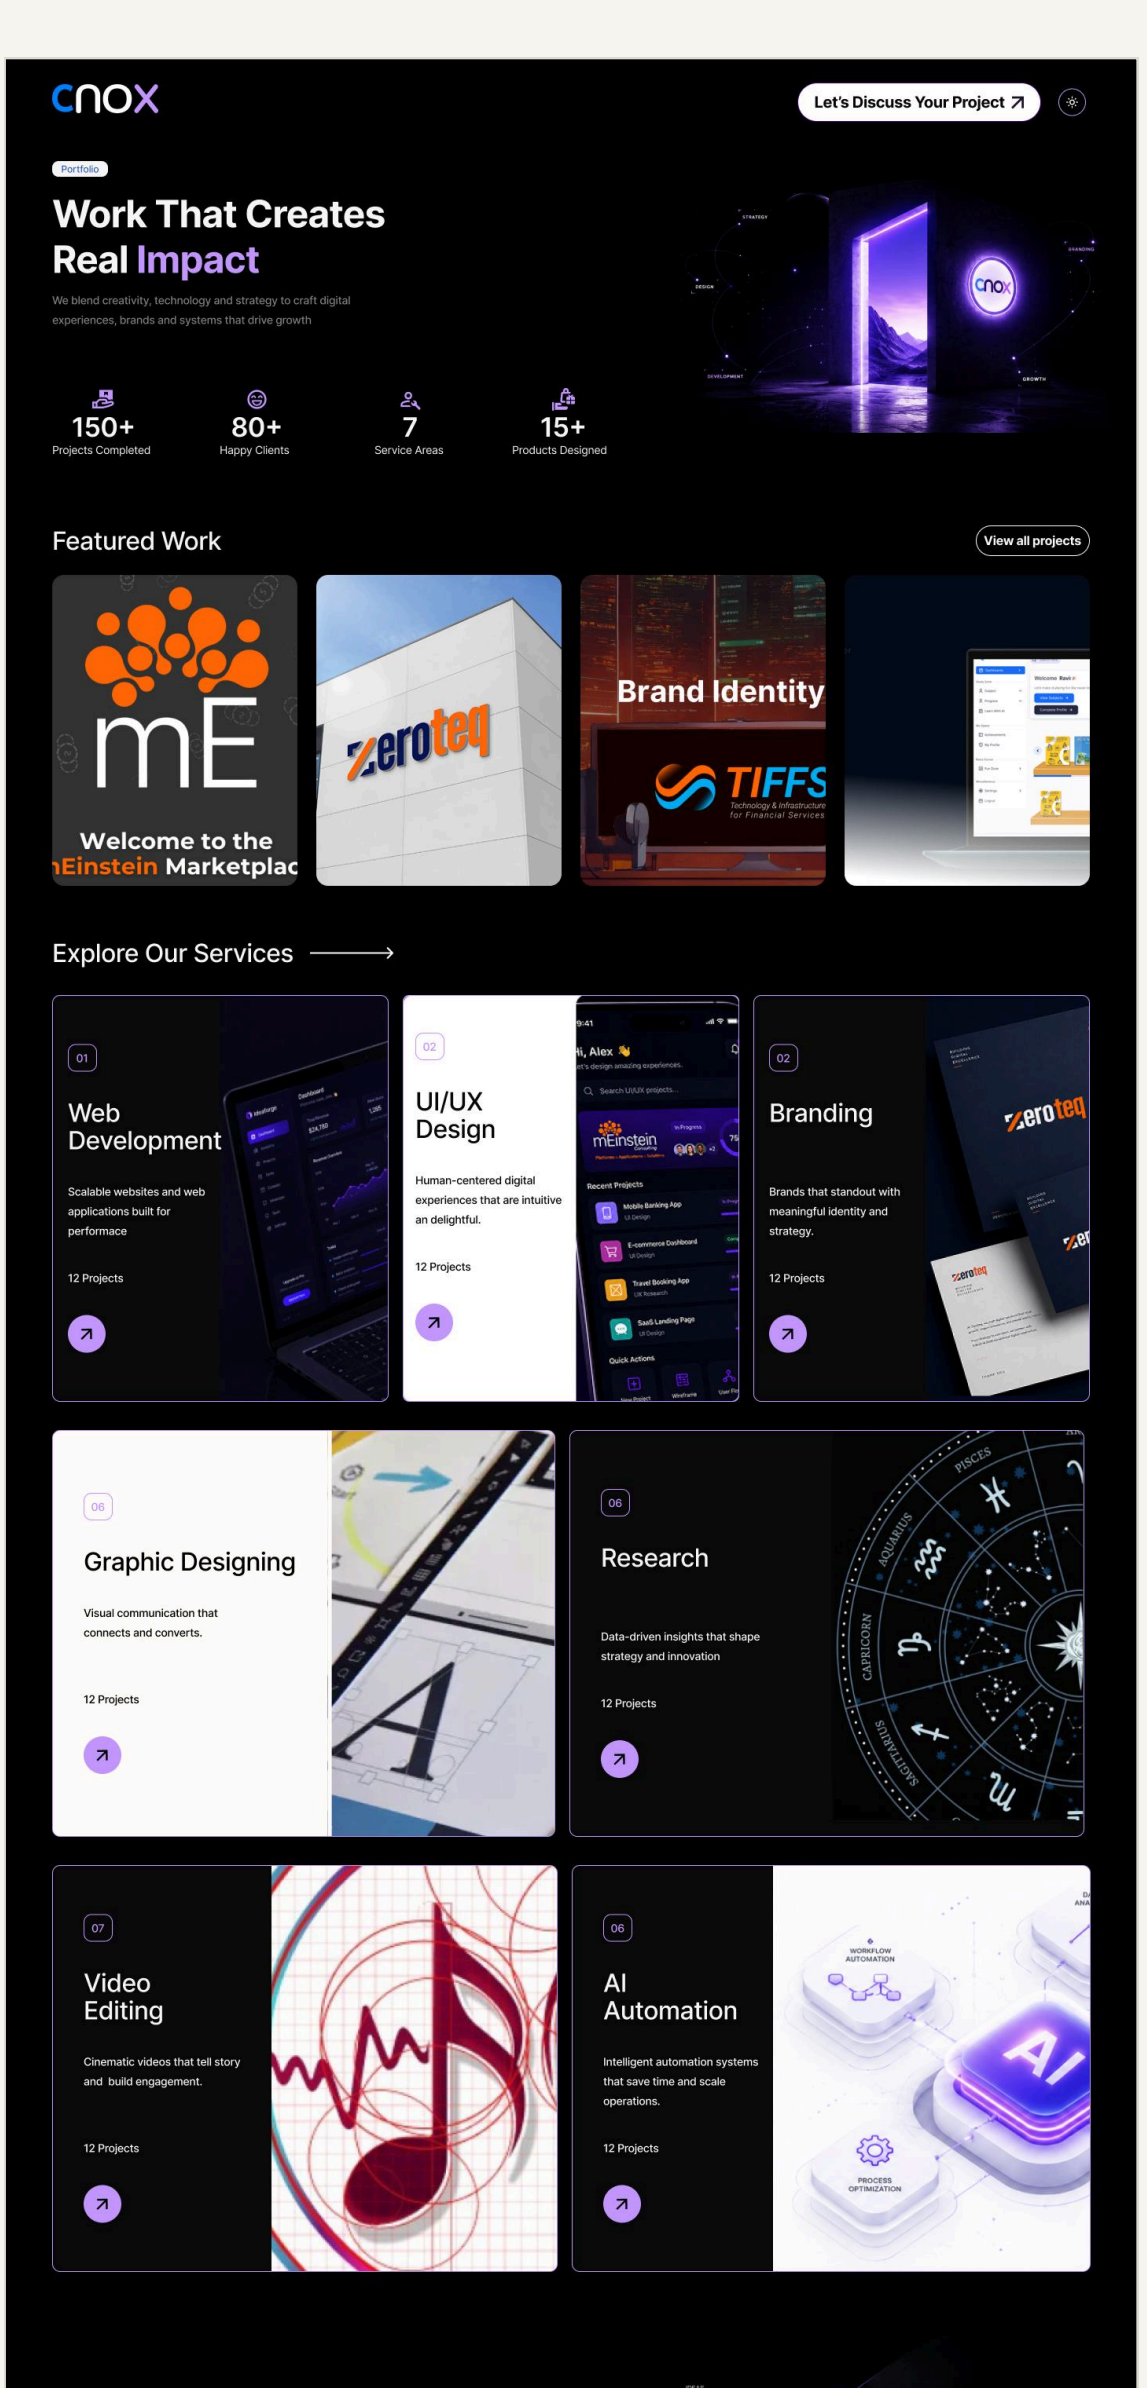
Every flow below was finalised to development-ready fidelity, with the reasoning behind each decision documented alongside the screen itself.

Homepage — light

Entry point

The homepage is the primary entry point, introducing the studio's capabilities two ways: **featured projects** so visitors can browse highlighted work immediately, and **services & curated categories** so they can navigate straight to the design domain they came looking for.





Homepage — dark

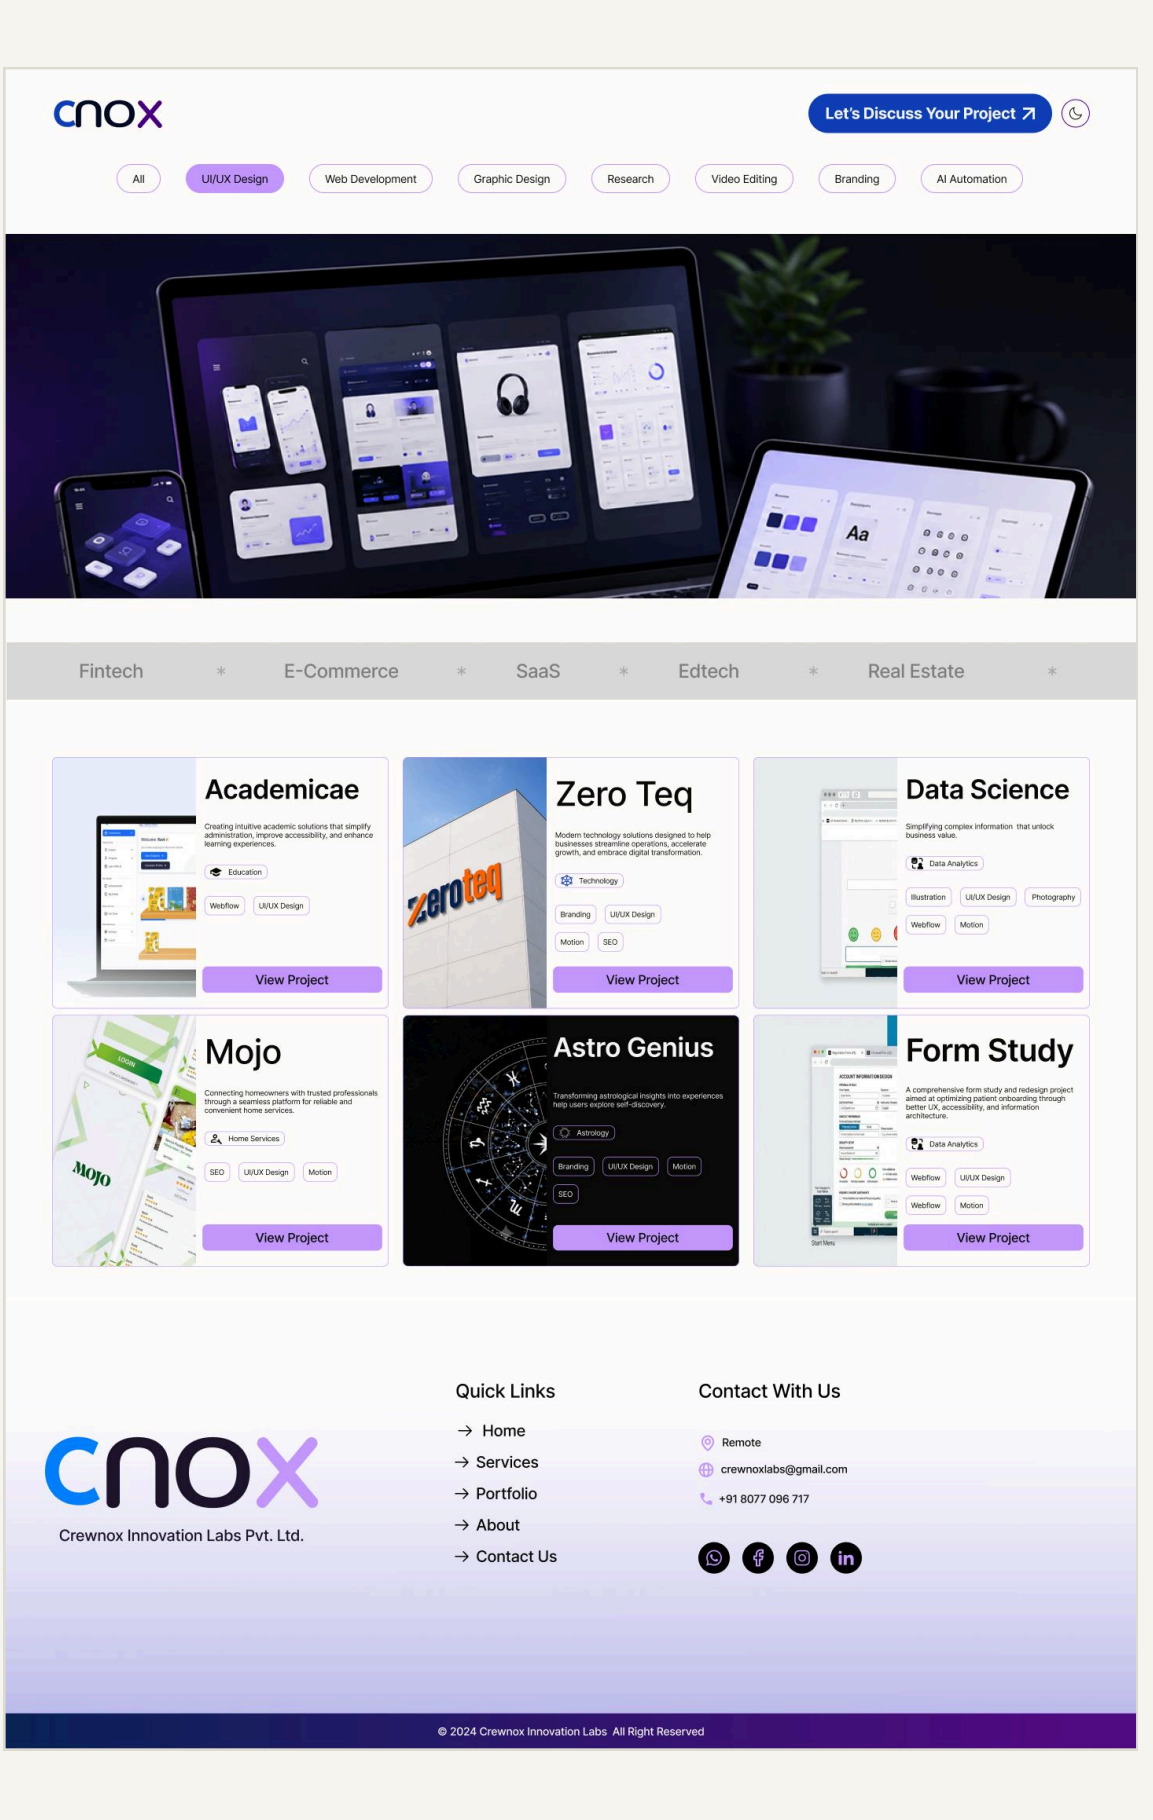
A theme that isn't an afterthought

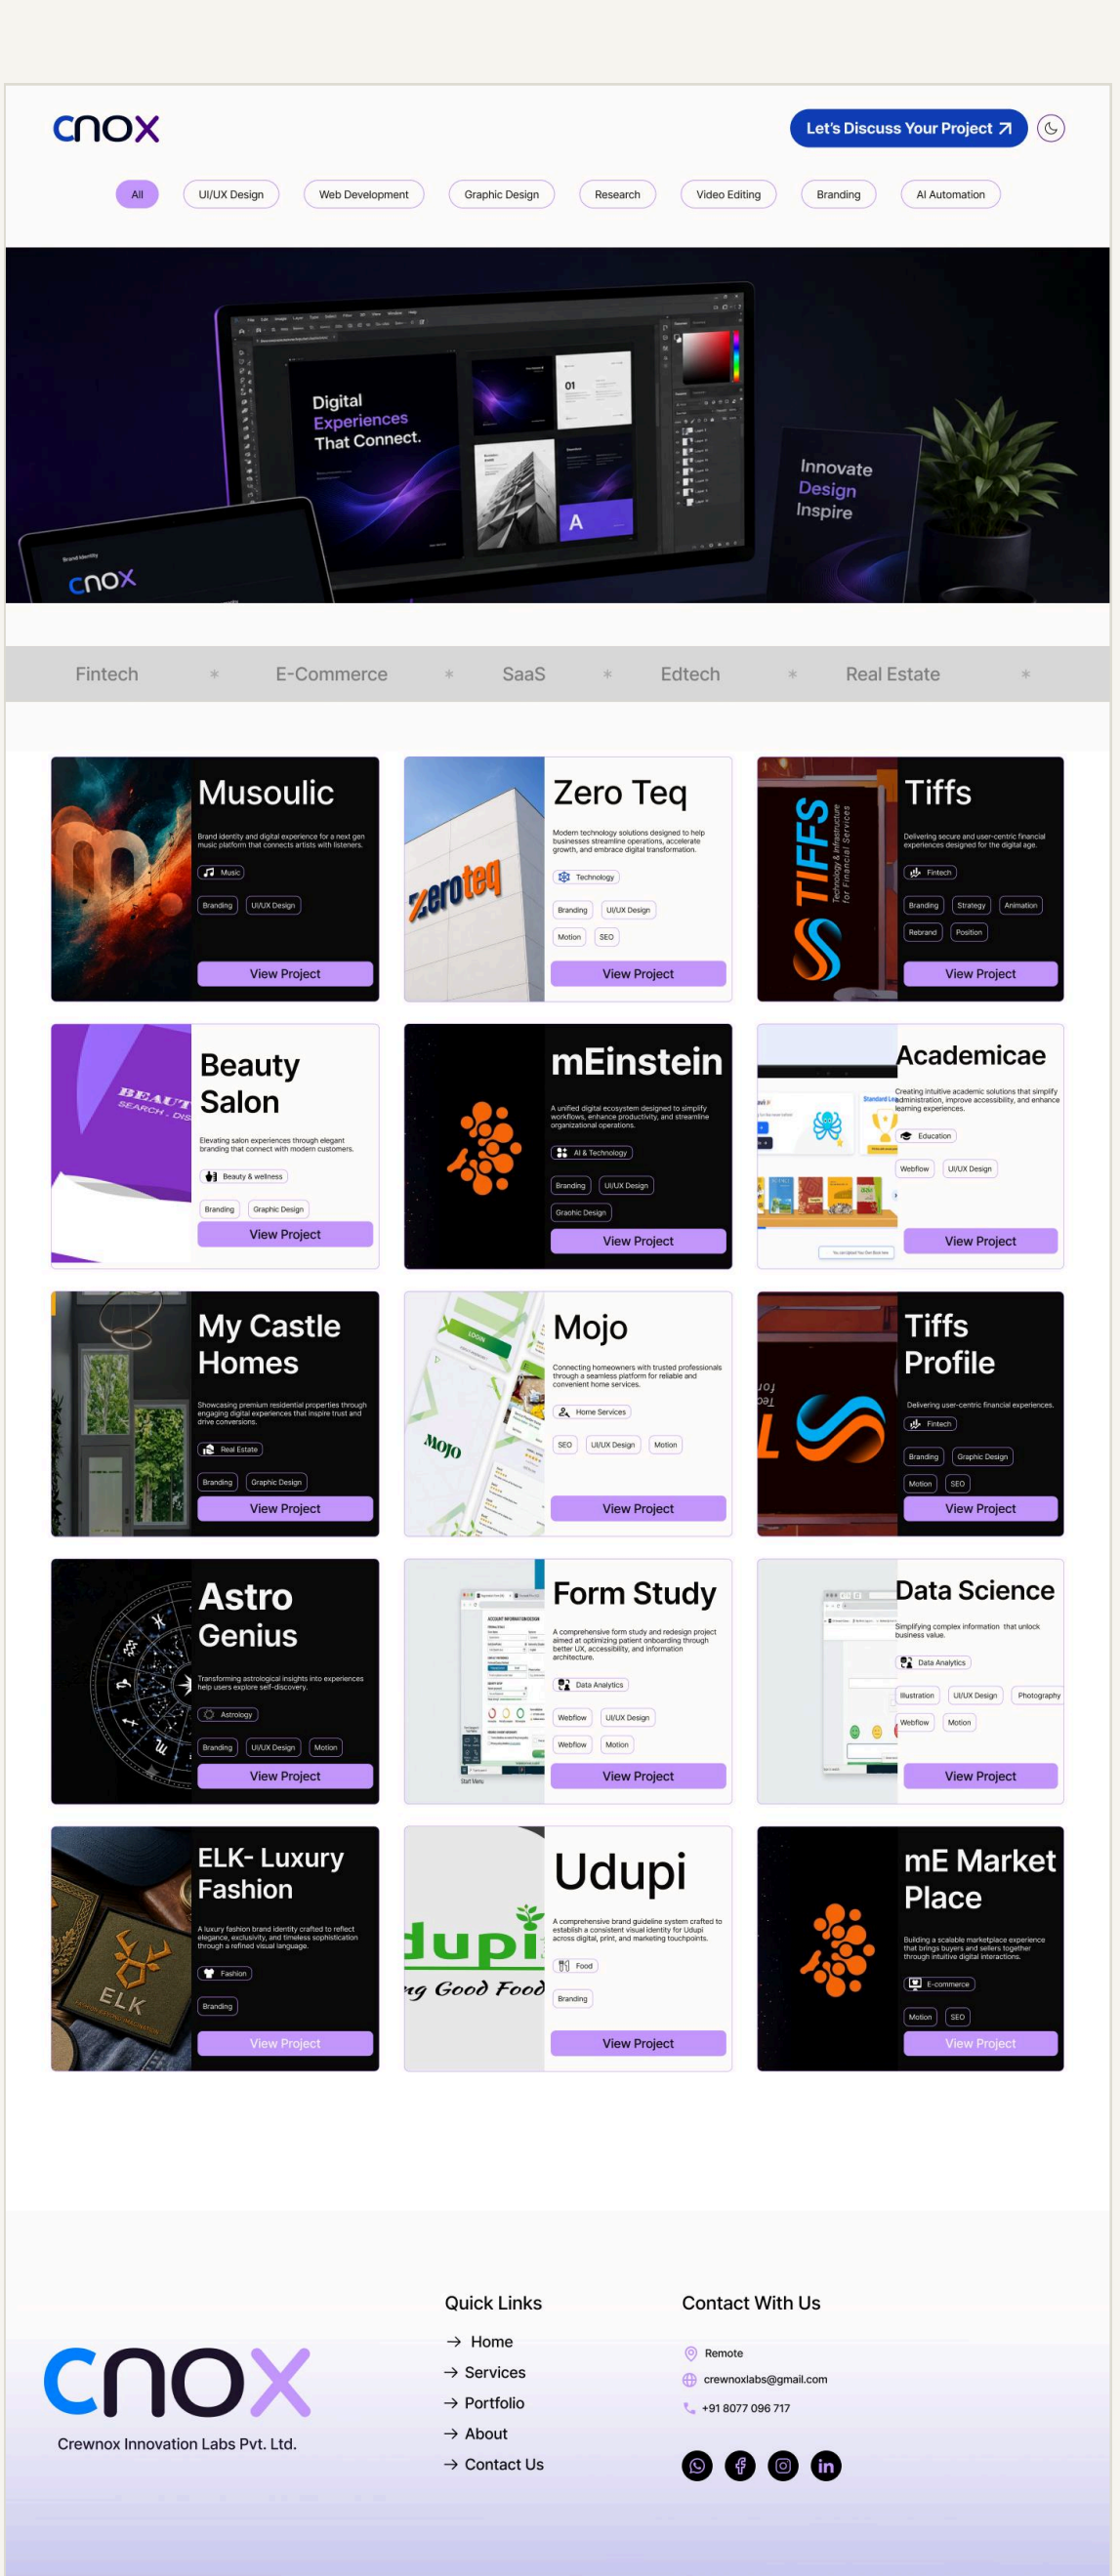
A dark-mode toggle lets visitors switch the whole layout without hitting visual constraints — built as a first-class theme rather than an inverted palette, so the studio's brand presence holds in either mode.

Sub-category landing

Straight to relevant work

After selecting a service or design category, visitors land on a dedicated page for that specialism. Featured case studies surface first for quick scanning, backed by a "View all Projects" CTA so anyone can still see the studio's full range.





All Projects

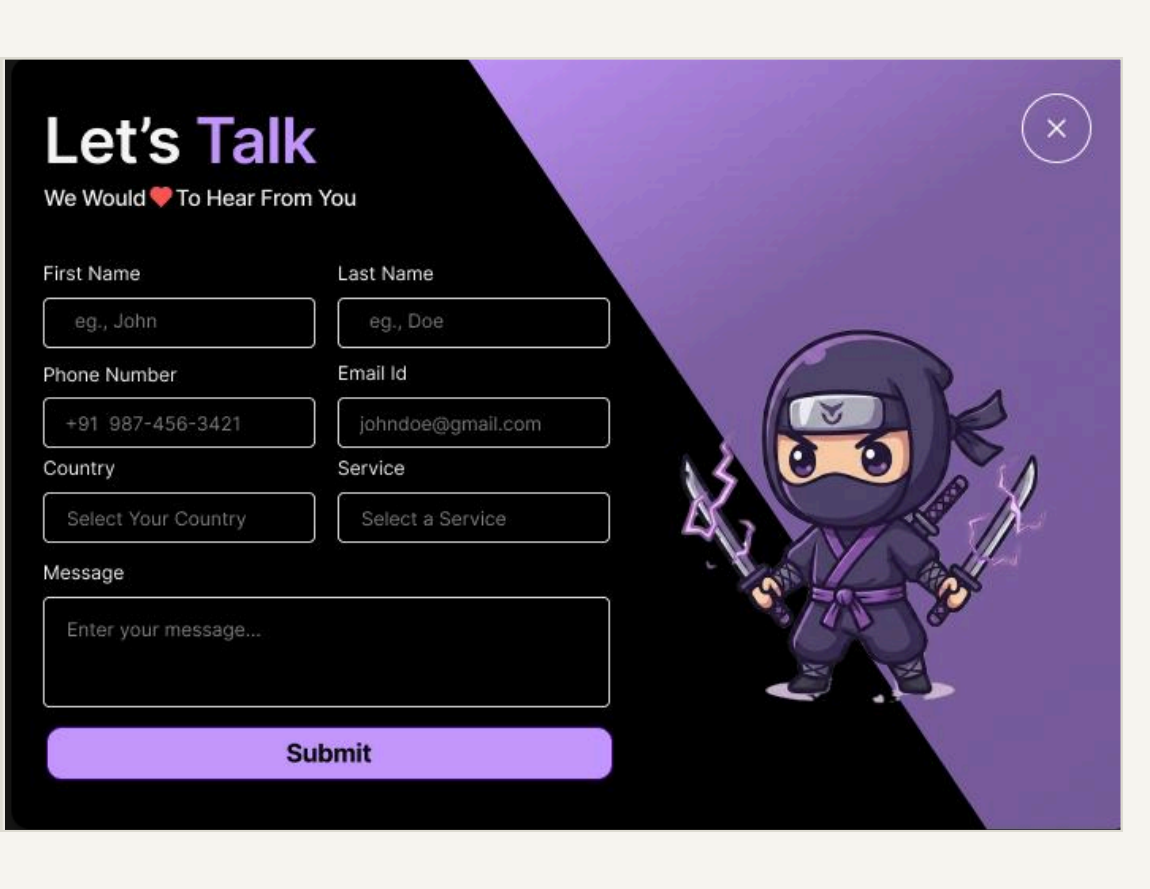
Built to be compared

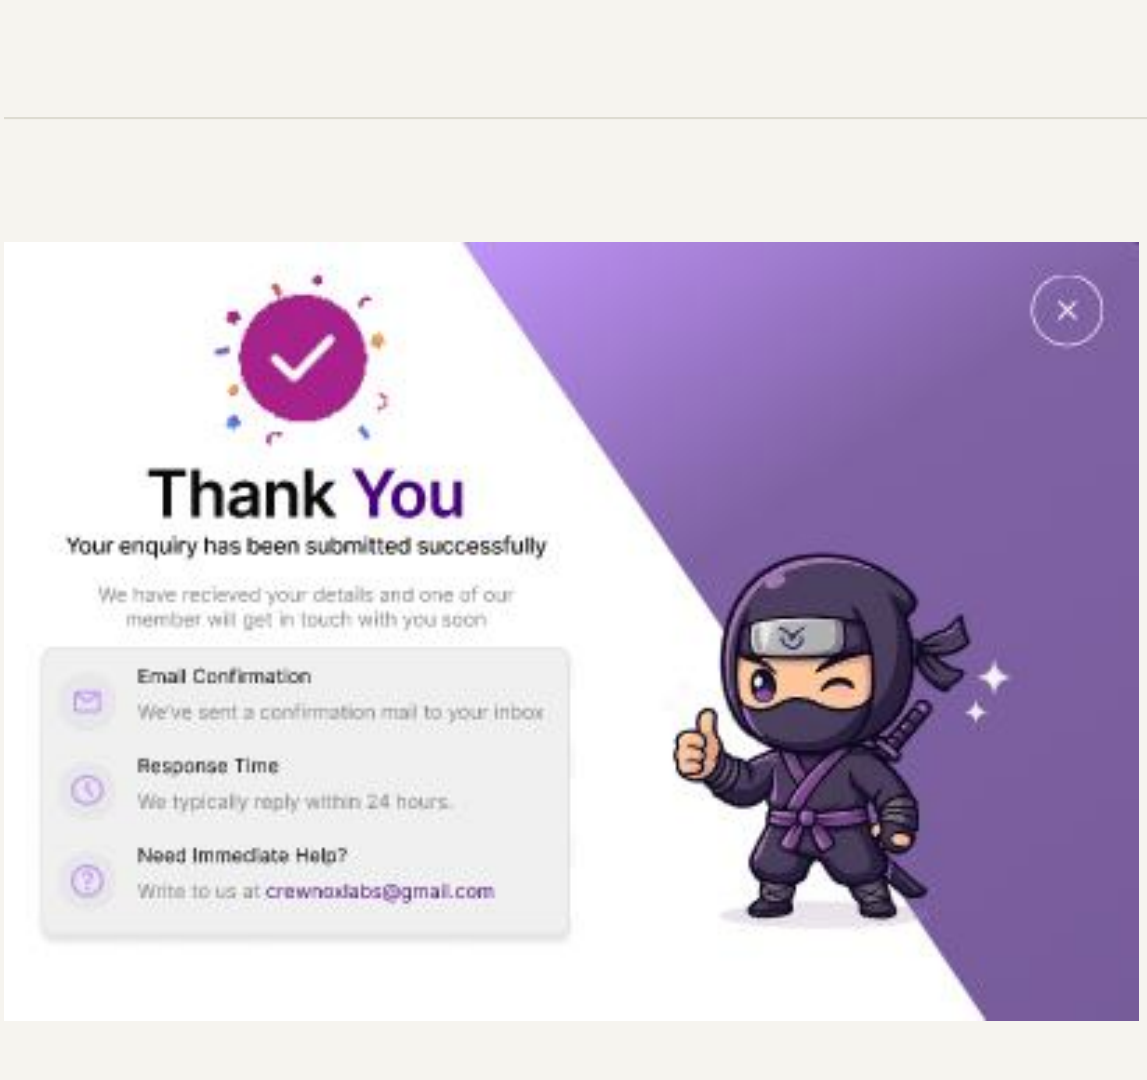
The full portfolio lives in a structured, filterable grid. Filtering by category speeds up discovery and lets a visitor compare projects directly — turning "browsing a website" into "evaluating a studio's range across industries."

Enquiry form

From convinced to in-touch

Once a visitor is convinced by the work, the enquiry form opens centred on the screen — keeping the page visible behind it — and captures just the essential project details needed to start a conversation, with no unnecessary steps in between.





Thank You

Your enquiry has been submitted successfully

Confirmation

Closing the loop

Submission ends with a clear confirmation — enquiry received, a note that the team will follow up, and a written email address as a fallback — so no one is left wondering whether the message actually went through.

What the redesign actually changed.

Taken together, the work moves the Crewnox site from a static showcase to a system built to convert interest into enquiries — in whichever theme, on whichever device, someone lands on it.

A consistent brand system

Light and dark themes, hero treatments, and grid formats all trace back to one shared resource library instead of being solved screen by screen.

A shorter path to enquiry

Every route through the site — homepage, category, or full grid — funnels toward the same low-friction enquiry form and a confirmed next step.

No dead ends

Categories without published work get a dedicated blank state that reassures rather than stalls, keeping visitors exploring instead of leaving.

Responsive by design

Mobile layouts were drafted alongside desktop from the start, across both themes, rather than compressed in at the end.
